-  UV 400
-  Blue Block Filter
-  Polycarbonate Lenses

Myopia Control Lenses

Myopia Control in Youth

Childhood myopia isn't just blurry vision—it's a gateway to blindness later in life. As the eye grows, higher prescriptions dramatically increase the risk of retinal detachment, glaucoma, and macular degeneration.

But this damage is preventable:

Myopia control lenses are the only proven solution to slow progression, and they work best when started early. Every year you delay, the prescription climbs and the risks solidify. By acting now, you're not just correcting today's sight—you're protecting your child's eyes for decades to come.

Don't wait. Their future vision is in your hands today.

Myopia control lens

Myopia Control Lenses for Children 6-15 years old.

Conventional myopia correction lenses: peripheral imaging falls behind the retina, the peripheral retina will send out the visual defective stimulation signal, and the eye response is to elongate the eyeball to make the retina grow backwards, resulting in the deepening of myopia in adolescents.

Defocal lenses: form a curved image of the eyeball on the retina, ensuring clear central imaging and eliminating peripheral retinal hyperopic defocus. The eye axis lengthens slowly or stops, thereby delaying the progression of myopia.

Advantages:

- Slow down myopia progression in children up to 60%
- Provide sharp vision and easy adaption
- Impact resistance for safety

Aspheric SV Lenses

Advantages of Aspherical Lenses.

- Up to 30% thinner and lighter – more comfortable for all-day wear
- Crisper, sharper vision – thanks to advanced precision optics
- Wider, clearer peripheral vision – so your child sees naturally in every direction
- No more "bug-eye" magnified look – even with high prescriptions, lenses stay slim and natural-looking

Bluecut Filter

Premium Bluecut Lens

Clear base bluecut lens with premium coatings

Premium Bluecut Lens

Superior Performance

- Reduced reflection, more transparent vision
- Protection from harmful blue light
- Enhanced transmittance, clear and comfortable vision
- Free from scratches, water, smudges, dust, etc.
- Easy to clean, longer durability

Superior Bluecut Lens HD

- Low reflection
- Crystal clear base color
- High definition
- High transmittance

Conventional Bluecut Lens

- High reflection
- Yellowish base color
- Low transmission
